Appendix 1 9
Appendix 2 10
Appendix 3 11
1. PURPOSE

The purpose of this policy is to ensure that all staff at NHS Highland, Highland and Argyll and Bute Councils understand their role and responsibilities in supporting expectant and new mothers and their partners to feed and care for their baby in ways which support optimum health and well-being.

All staff are expected to comply with the policy.

When referring to all staff – this means all staff who have contact with antenatal or breastfeeding women.

2. OUTCOMES

This policy aims to ensure that the care provided improves outcomes for children and families, specifically to deliver:

- Increases in breastfeeding rates at 6-8 weeks.¹
- Amongst parents who chose to formula feed, increases in those doing so as safely as possible in line with NHS Health Scotland guidance.
- Increases in the proportion of parents who introduce solid food to their baby in line with NHS Health Scotland guidance.
- Improvements in parents’ experiences of care – captured in UNICEF audit.
- Increase in number of women being referred to a trained breastfeeding peer supporter.
- Increasing the 6 – 8 week CHSP-PS form return to child health to 95% by December 2015.
- A reduction in the number of re-admissions for feeding problems to the children’s ward.

3. OUR COMMITMENT

NHS Highland, Highland and Argyll and Bute Councils are committed to:

- Providing the highest standard of care to support expectant and new mothers and their partners to feed their baby and build strong and loving parent-infant relationships. This is in recognition of the profound importance of early relationships on future health and well-being and the significant contribution that

¹ http://www.scotland.gov.uk/Publications/2011/01/13095228/0
breastfeeding makes to promoting positive physical and emotional health outcomes for children and mothers.

- Ensuring that all care is mother and family centred, non-judgemental and those mothers’ decisions are supported and respected.
- Working together across disciplines and organisations to improve mothers’/parents’ experiences of care.

3.1 As part of this commitment services will ensure that:

- All new staff are familiarised with the policy on commencement of employment.
- All staff will receive training to enable them to implement the policy as appropriate to their role. New staff will receive this training within six months of commencement of employment.
- The International Code of Marketing of Breast-milk substitutes\(^2\) is implemented throughout the services.
- All documentation fully supports the implementation of these standards.
- Parents’ experiences of care will be listened to through regular audit using the UNICEF Audit tool for Health Visiting Services.

4. CARE STANDARDS

This section of the policy sets out the care that the health visiting service is committed to giving each and every expectant and new mother. It is based on the UNICEF UK Baby Friendly Initiative standards for health visiting\(^3\), relevant NICE guidance\(^4\), Improving Maternal and Infant Nutrition; A Framework for Action\(^5\) and the Early Years Framework.\(^5 \, 6\)

4.1 Pregnancy

The service recognises that pregnancy is a significant time for building the foundations of future health and well-being. The potential role of health visitors to positively influence pregnant women and their families in this period is very important. Staff will therefore make the most of opportunities available to them to support the provision of information about feeding and caring for babies to pregnant women and their families. This will include ensuring that:

- Spontaneous antenatal contacts (such as visits to clinic) are used as an opportunity to discuss breastfeeding and the importance of early relationship building, using a sensitive and flexible approach.
- Members of the health visiting team proactively support and recommend the services provided by other organisations to mothers (e.g. antenatal programmes run by the maternity services, children’s centres or voluntary organisations).
- The service works collaboratively to develop/support any locally operated antenatal interventions delivered with partner organisations.

---

\(^3\) Updated Baby Friendly standard: [www.unicef.org.uk/babyfriendly/standards](http://www.unicef.org.uk/babyfriendly/standards)

\(^4\) NICE guidance on maternal and child nutrition: [http://www.nice.org.uk/ph11](http://www.nice.org.uk/ph11)

\(^5\) [http://www.scotland.gov.uk/Publications/2011/01/13095228/0](http://www.scotland.gov.uk/Publications/2011/01/13095228/0)

\(^6\) [http://www.scotland.gov.uk/Publications/2009/01/13095148/0](http://www.scotland.gov.uk/Publications/2009/01/13095148/0)
• The service will demonstrate best practice by ensuring that any woman with additional support needs, who has an antenatal plan, should have contact by their health visitor prior to delivery.

4.2 Support for continued breastfeeding
• A formal breastfeeding assessment using the UNICEF assessment form, which can be found in Appendix 1, will be carried out at the ‘new baby review’ or ‘birth visit’ at approximately 10-14 days to ensure effective feeding and well-being of the mother and baby. This includes recognition of what is going well and the development, with the mother, of an appropriate plan of care to address any issues identified.
• Mothers will be encouraged to refer to their own breastfeeding assessment form, at Appendix 2, which is part of the NHS Highland postnatal breastfeeding booklet.
• For those mothers who require additional support for more complex breastfeeding challenges a referral to the specialist service will be made as per Appendix 3. Mothers will be informed of this pathway.
• Mothers will have the opportunity for a discussion about their options for continued breastfeeding (including responsive feeding, expression of breast milk and feeding when out and about or going back to work), according to individual need.
• The service will work in collaboration with other local services to make sure that mothers have access to social support for breastfeeding.
• All breastfeeding mothers will be informed about the local support for breastfeeding via the NHS Highland postnatal breastfeeding booklet.

4.3 Responsive feeding
The term responsive feeding (previously referred to as ‘demand’ or ‘baby led’ feeding) is used to describe a feeding relationship which is sensitive, reciprocal, and about more that nutrition. Staff should ensure that mothers have the opportunity to discuss this aspect of feeding and reassure mothers that: breastfeeding can be used to feed, comfort and calm babies; breastfeeds can be long or short, breastfed babies cannot be overfed or ‘spoiled’ by too much feeding and breastfeeding will not, in and of itself, tire mothers any more than caring for a new baby without breastfeeding.

4.4 Exclusive breastfeeding
• Mothers who breastfeed will be provided with information about why exclusive breastfeeding leads to the best outcomes for their baby, and why it is particularly important during the establishment of breastfeeding (up to 6 weeks in most cases).
• When exclusive breastfeeding is not possible, the value of continuing partial breastfeeding will be emphasised and mothers will be supported to maximise the amount of breast milk their baby receives.
• Mothers who give other feeds in conjunction with breastfeeding will be enabled to do so as safely as possible and with the least possible disruption to breastfeeding. This will include appropriate information and a discussion regarding the potential impact of the use of a teat when a baby is learning to breastfeed.
4.5 Modified feeding regime
- There are a small number of clinical indications for a modified approach to responsive feeding in the short term. Examples include: preterm or small for gestational age babies, babies who have not regained their birth weight, babies who are gaining weight slowly. Reference should be made to the NHS Highland weight loss policy for the breastfed neonate [http://intranet.nhsh.scot.nhs.uk/PoliciesLibrary/Documents/Guideline%20for%20Prevention%20of%20Excessive%20Weight%20Loss%20in%20the%20Breastfed%20Neonate.pdf](http://intranet.nhsh.scot.nhs.uk/PoliciesLibrary/Documents/Guideline%20for%20Prevention%20of%20Excessive%20Weight%20Loss%20in%20the%20Breastfed%20Neonate.pdf)

4.6 Support for formula feeding
At the birth visit mothers who formula feed will have a discussion about how feeding is going. Recognising that this information will have been discussed with maternity service staff, but may need revisiting or reinforcing; and being sensitive to a mother’s previous experience, staff will check that:
- Mothers who are formula feeding have the information they need to enable them to do so as safely as possible. Staff may need to offer a demonstration and/or discussion about how to prepare infant formula.
- Mothers who formula feed understand about the importance of responsive feeding and how to:
  - Respond to cues that their baby is hungry.
  - Invite their baby to draw in the teat rather than forcing the teat into their baby’s mouth.
  - Pace the feed so that their baby is not forced to feed more than they want to.
  - Recognise their baby’s cues that they have had enough milk and avoid forcing their baby to take more milk than the baby wants.

4.7 Introducing solid food
All parents will have a timely discussion about when and how to introduce solid food including:
- That solid food should be started at around six months.
- Babies’ signs of developmental readiness for solid food.
- How to introduce solid food to babies.
- Appropriate foods for babies.

4.8 Support for parenting and close relationships
- All parents will be supported to understand a baby’s needs (including encouraging frequent touch and sensitive verbal/visual communication, keeping babies close, responsive feeding and safe sleeping practice).
- Mothers who bottle feed are encouraged to hold their baby close during feeds and offer that majority of feeds to their baby themselves to help enhance the mother-baby relationship.
- Parents will be given information about local parenting support that is available – this information will be given by local health visitors or early years workers.
4.9 Recommendations for health professionals on discussing bed-sharing with parents

Simplistic messages in relation to where a baby sleeps should be avoided; neither blanket prohibitions nor blanket permissions reflect the current research evidence.

The current body of evidence overwhelmingly supports the following key messages, which should be conveyed to all parents:

- The safest place for your baby to sleep is in a cot by your bed.
- Sleeping with your baby on a sofa puts your baby at greatest risk.
- Your baby should never share a bed with anyone who:
  - Is a smoker.
  - Has consumed alcohol.
  - Has taken drugs (legal or illegal) that make them sleepy.

The incidence of SIDS (often called “cot death”) is higher in the following groups:

- Parents in low socio-economic groups.
- Parents who currently abuse alcohol or drugs.
- Young mothers with more than one child.
- Premature infants and those with low birth weight.

Parents within these groups will need more face to face discussion to ensure that these key messages are explored and understood. They may need some practical help, possibly from other agencies, to enable them to put them into practice.

4.10 Monitoring implementation of the standards

The NHS Highland, Highland and Argyll and Bute council’s health visiting service requires that compliance with this policy is audited at least annually using the UNICEF UK Baby Friendly Initiative audit tool (2013 edition). Staff involved in carrying out this audit require training on the use of this tool.

Audit results will be reported to the Adult and Children’s Services committee and an action plan will be agreed by The Early Years Improvement Group to address any areas of non compliance that have been identified.

4.11 Monitoring outcomes

Outcomes will be monitored by:

- Monitoring breastfeeding rates at 6-8 weeks. Monitor that parents who chose to formula feed, are doing so as safely as possible in line with NHS Health Scotland guidance.
- Monitor the proportion of parents who introduce solid food to their baby in line with NHS Health Scotland guidance.
- Improvements in parents’ experiences of care.
- Increase in number of women being referred to a trained breastfeeding peer supporter.

The UNICEF UK Baby Friendly Initiative audit tool (2013 edition) is designed specifically for this purpose.
Outcomes will be reported to:

- The Early Years Improvement Group.
- Maternal and Infant Nutrition Improvement Group.
- The Adult and Children’s Services Committee.
## Appendix 1 – UNICEF assessment form

### Breastfeeding assessment form

If any responses in the right hand column are ticked: watch a full breastfeed, develop an action plan including revisiting positioning and attachment and/or refer to specialist practitioner. Any additional concerns should be followed up as needed.

Appendix 3 – Specialist service referral pathway

Breastfeeding Problems - Pathway of Referral to Infant Feeding Advisor

Post Delivery in Hospital

Breastfeeding support given by midwives, nursery nurses, or nursing auxiliaries.

Refer to NHS Highland Policies on: Hypoglycaemia (reluctant feeder and unsettled baby) or Excessive Weight Loss in the Breastfed Neonate.

If breastfeeding problem not addressed by above, please refer to hospital breastfeeding trainer.

If unable to rectify or hospital breastfeeding trainer not available only then contact the Infant Feeding Advisor on 01463 704842 or 07795 645302
